Former Air Force Secretary Peters visits lab exhibit

PETERS VISITS LAB — Former Secretary of the Air Force F. Whitten Peters, right, visits with Kate Fry and David Witte of the Air Force Research Laboratory's Directed Energy Directorate at the 17th National Space Symposium, which took place in Colorado Springs, Colo., April 9-12. Peters was at the laboratory's corporate display — among the companies and organizations represented in more than 27,000 square feet of symposium exhibit space. The directed energy portion of the laboratory's exhibit highlighted space surveillance and showcased the directorate's telescopes, two of which are the largest in the world capable of imaging low-orbiting satellites passing quickly overhead. @
